iPhone Controlled Color LED Lights From MEA Mobile

Clark Griswald Envious

AUCKLAND, New Zealand--([BUSINESS WIRE](#))--MEA Mobile today announced the official commercial release of [iGloLEDset](#), the first ever available, real-time, iPhone based, controller for color lights. It's Christmas lights on steroids.

Users control a 16' strip of LED lights by moving the iPhone around in the air, or by touching the screen to paint the lights different colors. "iGloLEDSet is the most physically engaging lighting technology since the on switch," said Bruce Seymour managing director of MEA Mobile, "Devices controlling other devices is convergence defined. At MEA Mobile, we are excited to be a part of this eruption which is the mobile device space today."

Also available starting today is a [Car Kit](#) which ships with a power inverter to run the iGloLEDset inside your car. "Before today only limited quantities of the iGloLEDset were available. Our production is now in full swing and we anticipate robust holiday sales for Christmas lights applications and more," said Seymour.

iGloLEDset is the perfect gadget gift for the person in your life who loves tech. As of today the product is shipping worldwide and is now available through [Amazon.com](#) or directly at [igloledset.com](#). While hundreds of presets are available, the real fun is programing your own sequences. From subtle and smooth to wild and crazy, you're in control with iGloLED.

Features:

- Real-time iPhone Control Of Color LED Lights
- Works With iPhone, iTouch, iPad
- 16' Strip of 120 Full Color LED Lights
- Free Downloadable [Control App](#)
